

GASTROSCOPY CLINIC

Tuesday 19th & Thursday 21st October

**Have your horse scoped for gastric ulcers
with huge savings - £75 per horse**

Does your horse display signs of any of the following?

- **Aggression • Wind sucking • Colic • Resistance to tacking up**
- **Poor performance such as reluctance to go forward**
- **Stopping or running out at jumps • Struggle to keep weight on?**

If yes to any of the above, your horse may have gastric ulcers

Each horse will be scoped and where necessary be given a detailed treatment plan by one of our experienced vets

£75 including sedation for horses not treated for ulcers within 6 months (usually £276 without sedation, a huge saving of over £200)

£150 including sedation for horses treated within the last 6 months (usually £276 without sedation)

Please note, these prices are for the initial scope only, any subsequent scopes booked in will be at the standard rate of £276 plus sedation. All follow up treatments and medication must be purchased from us (Cliffe Equine Vets). If the owner requests a referral to another practice for treatment they will be charged the difference between the clinic price and our usual scope & sedation costs. This must be paid in full before we will release any referral documents.

Treatment often covered by insurance, check with your provider
