

CLINIC WORMING PROGRAMME 2021

	<u>DATE</u>	<u>WORMER</u>	<u>TREATMENT OF</u>
	January	Equest	Encysted small red worms
8 weeks	April	Equimax or WEC	Roundworms, Bots & Tapeworms
8 weeks	June	Panacur or WEC	Roundworms & Bots
8 weeks	August	Panacur or WEC	Roundworms & Bots
	October	Equimax or WEC	Roundworms, Bots & Tapeworms

1. **New Horses - We recommend that all new horses coming to your yard be given either a single dose of Equest Pramox. This is to treat all round and tapeworms (including any encysted larvae) and should be done regardless of previous worming history.**
2. **Best practice is to perform a targeted worming strategy for each yard which would start with a worm egg count in April. An individual plan for your owners would then be discussed with you by one of our vets. These programs lead to a decrease in development of drug resistance in parasites and for many horse owners will lead to a cost saving. Please call the practice if you would like to discuss this further.**
