

# SEIZURE CLINIC

Our seizure clinic is a specialised service which ensures that owners receive the dedicated time and support required to understand their pets needs while also developing a personalised treatment plan for the pet.

## About our clinic

Our neurology team has a wealth of experience in diagnosing and managing epilepsy. Some of our team have a specific interest in the area and have achieved additional qualifications and contributed research publications relating to the field of epilepsy. When managing patients with epilepsy, the quality of life of both pets and owners remains our main priority.

Seizures can understandably be very distressing for owners, and their timing is often unpredictable. Therefore, we are here to help reach a diagnosis quickly and to optimise the medical management of a pets epilepsy by providing a tailored plan.

## Reasons to attend

- Ongoing seizure activity despite first line medical treatment
- Alternative treatment options in refractory cases
- Additional help with diagnosis, management and decision-making
- Help with seizure education including the development of a seizure action plan and how to keep pets safe

## Packages on offer

We offer the following investigation packages, based on recommendations from the International Veterinary Epilepsy Task Force.

### Tier I package

£500

Package includes:

- Consultation with a neurologist
- Physical and neurological examinations
- Blood sampling (including a complete blood count, biochemistry profile, and dynamic bile acids or ammonia)
- Urinalysis

### Tier II package

£3500

Package includes:

- All of tier I
- General anaesthesia
- MRI of the brain
- CSF analysis ('spinal tap')

### Add on EEG - £200

In appropriate cases conscious or sedated EEG may be performed
