

K-Laser Therapy at Towerwood Vets

We have been offering K-Laser therapy for our patients for a number of years now and have been delighted with the healing and pain relief properties it can bring to our patients. Laser therapy has many applications and documented benefits. In particular our team use our class 4 K-Laser therapy unit to help patients with reduction of pain due to arthritis, reduction of swelling and pain from trauma and it has a very beneficial application in wound healing.

During each painless treatment, laser energy increases circulation, drawing water, oxygen and nutrients to the damaged area. This acts like acupuncture without the needles, creating an optimal healing environment that reduces inflammation, swelling, muscle spasms, stiffness and pain. As the injured area returns to normal, function is restored and pain is relieved.

Rosie

Ronnie

Most patients will experience noticeable improvement in their pain symptoms after 2-3 treatments. Following the initial 6 treatment sessions, individuals may require treatment at 1-3 week intervals to maintain the beneficial effects.

Meet Misty!

Linda has been bringing Misty for K-Laser therapy for back and neck pain since 2016 and has found it an invaluable part of Misty's therapy, getting him back to his usual self. Here's what Linda had to say:

“Misty is my 10 year old Bedlington Terrier who back in the summer of 2016 had a very vigorous sneezing fit resulting in him putting his back out and being temporarily paralysed. He had extensive laser treatment and acupuncture which helped him regain his mobility and freed him from pain. Misty then had a problem with his neck last year. He couldn't turn his head it was so painful for him, again he was treated with laser which totally resolved the problem. Misty has Cushings disease which means he can't have regular pain relief. He is currently undergoing more laser treatment as he has a painful shoulder and back. I would recommend laser treatment, it has helped Misty enormously.”

If you think K-Laser therapy could help your pet, speak to our nurses or your vet who will be able to organise a session and treatment plan. Your pet must have an assessment by one of our vets prior to their first treatment.

Ask our team for further information and current offers!
